

# AGRISPON<sup>®</sup>

# Cotton

Venezuela

Cotton yield increased with Agrispón and reduced nitrogen.

100% N: -8%

85% N: +36%

77% N: +32%

71% N: +16%

Agrispón was applied at 1 liter/hectare (1 gallon/10 acres) at flowering (70 days after planting).

All plots received 350 kg/ha (312 pounds/acre) of 13-13-21 starter fertilizer at planting. This was the only time the 71% N plot was fertilized, the other plots received a second application 54 days later at an amount to provide the specified nutrient level.

## Cotton Yield
